

a

Eight stress regimes, $2 \times 2 \times 2$

Twelve taxa

assembled into 22 compositions

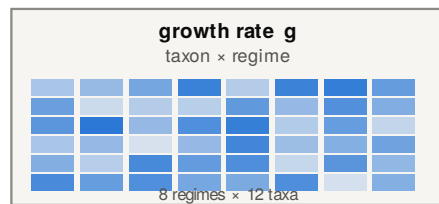

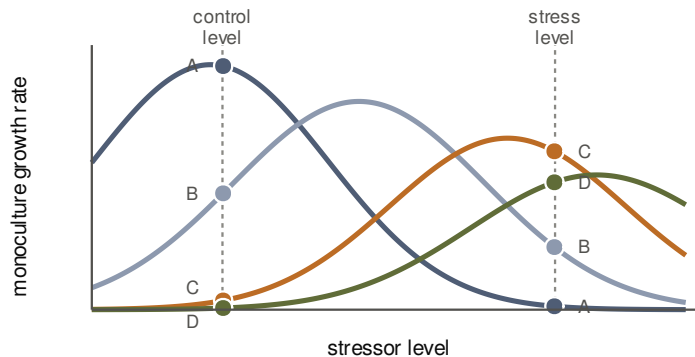

each grown in every regime

48 h batch culture → 16S amplicon composition + OD_{600}

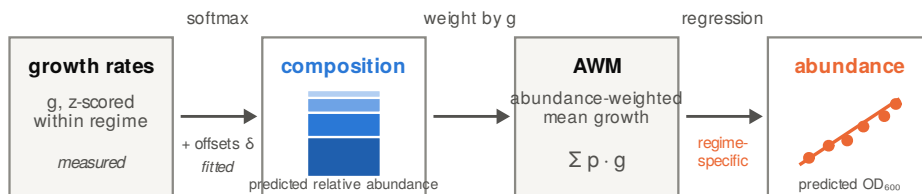

b

Reaction norms measured once per taxon (Carmichael et al. 2025)

rank order changes between levels

c

transfers without community data from the focal regime

needs calibration against the focal regime

d

Held-out tests: composition and abundance each evaluated on what was withheld (Fig. 5)
